

REDA Fire & Hazard Control is a specialized company with over two decades of experience and backed by complete in-house capabilities at its manufacturing plant at Dammam II Industrial Area, Kingdom of Saudi Arabia.

Its Novec 1230™ and FM-200® filling facility is the first of its kind in the region to supply fire suppression systems from TYCO Fire Protection Products. The facility provides more efficient service for customers across Saudi Arabia and other parts of the MENA and significantly improves lead times on suppression system supply and maintenance.

CLEAN AGENT FILLING FACILITY

CLEAN AGENT FILLING FACILITY

CAPABILITIES

- In-process Inspection Witness
- Changeability
- Ready-to-Connect Modular Systems
- After Sales, Spares Inventory Availability
- Local Warranty Claims

REDA Fire & Hazard Control has a long-standing relationship with TYCO Fire Suppression & Building Products, with its facility serving as a recognized extension of the TYCO manufacturing facilities in Marinette (USA) and Great Yarmouth (UK). REDA Fire & Hazard Control has adopted the latest technology from TYCO, using only a trained and certified workforce and TYCO-defined procedures, all of which are Underwriters Laboratory (UL) listed and Factory Mutual (FM) approved. All delivered products also include a quality seal mark from International Qualifying Benchmark of UL and FM.

Fire Suppression Systems are of significant importance in any industry but it is reasonable to expect that the owner who may voluntarily select the best available product and differentiates the quality and reliability of system will serve his purpose of protecting life and property against fire.
